PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of hands-on experience building, automating, and managing CI/CD pipelines, cloud infrastructure, and containerized application deployments for large-scale, globally distributed, multi-tenant SaaS production systems on AWS. Expertise in designing and operating end-to-end delivery pipelines using Jenkins, Git, Flux CD, and GitOps workflows, automating infrastructure provisioning with Terraform, and Ansible, and orchestrating containerized microservice workloads via Docker, Kubernetes (EKS), ECS, and Helm. Strong production support background with 24×7 on-call ownership, incident troubleshooting, root cause analysis, blameless postmortems, and SLO tracking. Proficient in Linux system administration (Ubuntu, CentOS), monitoring and observability (Datadog, CloudWatch, Grafana, ELK, Splunk), Python/Bash/Go scripting, and event-driven architectures using Kafka and AWS SQS. Passionate about automation-first culture, infrastructure as code, continuous delivery, and empowering development teams to ship faster and more reliably. AWS Certified Solutions Architect and M.Sc. Computing candidate based in Ireland.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, ECS, EKS, S3, RDS, Aurora Postgres, Route 53, CloudFront, IAM, ASG, SQS, CloudFormation), basic Azure & GCP, hybrid/cloud-native architectures
- **Containers & Orchestration:** Docker, Kubernetes (EKS/GKE), Helm, Amazon ECS, CNI networking, Ingress controllers, container lifecycle management
- **IaC & Configuration Management:** Terraform, Terragrunt, Ansible, CloudFormation, Puppet (familiar)
- **CI/CD & GitOps:** Jenkins, Git/GitHub/Bitbucket, Flux CD, TeamCity, Maven, shell scripting (Bash), Python automation, Go (learning)
- **Monitoring & Observability:** Datadog, Prometheus (familiar), Splunk, Grafana, CloudWatch, AppDynamics, PagerDuty, ELK stack, OpenTelemetry concepts, custom health checks & alerting
- **Event Streaming:** Kafka, AWS SQS, event-driven messaging and stream processing
- **Databases:** Aurora Postgres, Oracle RDS, MySQL, relational database management and query optimization
- **Systems & Networking:** Linux (Ubuntu, CentOS), TCP/IP, HTTP/HTTPS, DNS, load balancing, VPC, security groups
- **Application Platforms:** Java/Apache/Tomcat application stacks, JSON, REST APIs, web application architecture, web UI design fundamentals
- **Authentication & SSO:** SSO, SAML 2.0, OAuth 2.0, Okta (familiar), identity federation and access management
- **DevOps & Production Support:** Incident management, on-call rotations, SLO/SLI tracking, blameless postmortems, root cause analysis, capacity planning, runbook creation, automation-first mindset
- **Agile Methodologies:** Scrum, Kanban, sprint planning, retrospectives
- **Open Application Model:** KubeVela, Crossplane (exposure)

PROFESSIONAL EXPERIENCE

DevOps Engineer / Cloud Operations (SRE) *Jan 2020 – Sep 2023*

NetEnrich Technologies | Hyderabad, India

Client: Disney Interactive

Supported large-scale, multi-tenant SaaS production systems on AWS across four global regions, driving reliability, automation, and observability for microservice-based e-commerce platforms serving millions of daily transactions.

- Managed shared multi-tenant AWS infrastructure for four large-scale Disney e-commerce platforms (EU, US, Japan, Asia-Pacific), ensuring high availability, performance, and reliability across globally distributed SaaS microservice-based systems and customer-centric applications.
- Engineered and maintained SSO/SAML/OAuth-based authentication integrations for secure, seamless user access across regional storefronts, collaborating with identity teams on federation workflows and Okta-compatible configurations.
- Built and enhanced comprehensive observability tooling, metrics, and dashboards using Datadog, CloudWatch, Splunk, Grafana, ELK, and AppDynamics to support global platform infrastructure and maintain platform SLOs across all regional storefronts.
- Automated infrastructure provisioning and deployment tasks using Terraform, and Ansible, reducing configuration drift, improving deployment consistency, and continuously enhancing the team's operational presence in AWS.
- Deployed and managed containerized microservice workloads via Amazon ECS, EKS (Docker, Helm), validating task definitions, Kubernetes manifests, CNI networking, and Ingress configurations for reliability under variable, region-specific traffic patterns.

- Implemented event-driven messaging and stream processing using Kafka and AWS SQS for inter-service communication, ensuring reliable message delivery across distributed microservices.
- Managed and supported Java/Apache/Tomcat-based production application stacks, coordinating releases across regions with CI/CD pipelines using Jenkins, Git/Bitbucket, and Flux CD for smooth GitOps-driven code promotions with minimal downtime.
- Performed pre-scale capacity checks and infrastructure readiness ahead of major launch events (Black Friday, holiday sales, product releases), validating Auto Scaling policies, load balancer configurations, and CDN caching to handle traffic surges.
- Designed and maintained Auto Scaling Groups and self-healing policies to deliver resilient services, ensuring seamless user experience during peak traffic events.
- Led incident troubleshooting in on-call rotations using PagerDuty, rapidly triaging issues across payment, catalogue, and web-page microservices; drove blameless postmortems and root cause analysis with cross-functional development teams.
- Supported and operated Aurora Postgres and Oracle RDS database instances, performing query optimization, backup validation, and capacity planning for production workloads.
- Mentored junior engineers on DevOps and SRE best practices, created system documentation, runbooks, and training materials to educate and empower teammates on operational workflows and incident response procedures.
- Championed a culture of reliability by promoting blameless postmortems, SLO/SLI tracking, and continuous learning from incidents across the platform team.
- Leveraged AI-driven tooling and data-driven insights to identify operational bottlenecks, automate repetitive workflows, and drive continuous improvement in platform reliability and team productivity.

Key Achievement: Reduced average incident resolution time by approximately 25% through workflow automation, structured triage practices, proactive observability enhancements, and cross-functional collaboration with development teams.

DevOps / Technical Operations Engineer *Oct 2023 – Jun 2024*
TechWing | Rajahmundry, Andhra Pradesh, India

Managed cloud infrastructure and operational processes for EdTech platforms hosted on AWS, supporting multi-tenant SaaS environments with a focus on reliability and automation.

- Managed AWS cloud infrastructure and Linux servers (Ubuntu, CentOS, RHEL) to ensure high availability and performance of production systems, including Aurora Postgres database instances.
- Supported CI/CD-based application deployments across development, staging, and production environments using Jenkins, Git, and GitOps workflows.
- Implemented and improved monitoring and alerting using CloudWatch, Datadog, Grafana, and ELK, enabling faster incident detection and proactive anomaly identification.
- Developed runbooks, operational documentation, and training materials for incident response, deployments, and system maintenance to empower the operations team.
- Performed Linux administration including user management, system configuration, patching, log analysis, and security hardening.
- Collaborated with engineering and product teams to implement DevOps best practices, improve infrastructure reliability, and adopt Agile methodologies (Scrum, Kanban).
- Participated in on-call incident management rotations, conducting blameless postmortems and driving continuous improvement from incident learnings.

CERTIFICATIONS

- AWS Certified Solutions Architect – Amazon Web Services (2024)

EDUCATION

Master's in Computing Information System Processes (NFQ Level 9) *Sep 2024 – Oct 2025*
South East Technological University | Waterford, Ireland

Bachelor of Technology in Electrical & Electronics Engineering (NFQ Level 8 Equivalent) *May 2018 – May 2021*
Aditya University | Surampalem, India
